Manufacturer Disclaimer	Metal Dusts from the buffing of brass, zinc and especially magnesium or aluminum
	along with buffing cloth fibers and compound residues may cause fires or explosions
	when exposed to a strong ignition source. These fires typically are started in the vent
	pipes, collector bags or receptacles used in waste gathering from the buffing
	ventilation system. Make sure that the collectors are changed frequently and the
	waste kept in a cool, dry environment that is free from sparks or other strong ignition
	sources. The collection devices should be grounded to minimize static charges.Dust
	collection receptacies should be designed by engineers who are familiar with the

potential hazard of a flammable or explosive dust. If such a fire occurs, fight the fire with a Class D fire extinguisher. Do not use water or a halogenated extinguishing media.
