

Romanoff Investment Blaster Cabinet

1. Connect to your power source.
2. Connect water inlet valve on lower right side of cabinet to cold water source (1/2" NPT) and then open the valve.
3. Connect right or left side drain to a barrel or tank which the water from the cabinet will flow. It is best to connect to a barrel or tank first to prevent any investment from going into your drainpipe.
4. Screw plug into drain side not being used.
5. Turn on switch above viewing glass.
6. Place foot pedal in convenient spot on the floor in the front of the cabinet away from any water.
7. Place casted flasks inside the cabinet from the right or left side.
8. Put your hands into the gloves.
9. Firmly hold the tree to be cleaned and step on the foot pedal until investment is Removed.
10. To adjust the water stream, pull down the nozzle body and turn, then push up to Lock.
11. The oil in the high pressure pump should be changed at least every three – six months. Use a high quality SAE 30 grade non-detergent oil. The pump is accessed from the back of the cabinet.

**IMPORTANT: NEVER STEP ON THE FOOT PEDAL WITHOUT THE SIDE DOORS COSED
AND ALWAYS WEAR THE GLOVES**
